

TABLE OF CONTENTS

<i>Preface</i>	1-2
1 Introduction.....	1-7
1.1 Topological issues in image analysis	1-7
1.2 Pixcavator – image analysis and simplification software.....	1-9
1.3 The basics of image processing.....	1-17
2 Binary images	2-21
2.1 Topological features of images	2-21
2.2 The cell decomposition of the image	2-21
2.3 Partition of the image.....	2-23
2.4 The data structure of the algorithm	2-25
2.5 The run the through pixels of the image.....	2-27
2.6 Adding edges.....	2-28
2.7 Merging and splitting cycles	2-31
2.8 Traversing cycles	2-32
2.9 Image simplification.....	2-34
2.10 The homology group of a binary image	2-37
3 Search of binary images.....	3-39
3.1 Image classification.....	3-39
3.2 Image similarity measures.....	3-39
3.3 Image alignment.....	3-40
4 Gray-scale images.....	4-42
4.1 Overview.....	4-42
4.2 The data structure and the step of the algorithm	4-46
4.3 The contrast based simplification of images	4-47
4.4 The output of the algorithm.....	4-51
4.5 The homology group of a gray scale image	4-53
5 Search of gray scale images - projects	5-56
5.1 Image classification.....	5-56
5.2 Image similarity measures.....	5-56
5.3 Image alignment.....	5-57
6 Single-parameter images.....	6-58
6.1 Overview	6-58
6.2 The step of the algorithm	6-59
6.3 Adding and removing edges.....	6-61
6.4 Merging and splitting cycles	6-63
6.5 The lifespan based simplification of image sequences.....	6-65
7 Image sequences - projects	7-68
7.1 Overview.....	7-68
7.2 Topologically constrained simplification	7-69
7.3 Object tracking.....	7-70
7.4 Using simplification in image compression	7-71
7.5 Multi-resolution images	7-72
8 Color images.....	8-74
8.1 Overview.....	8-74
8.2 The data structure.....	8-76
8.3 The step of the algorithm	8-77
8.4 Matching frames.....	8-79
8.5 Merging and splitting cycles	8-80
8.6 Image simplification.....	8-82
8.7 The output of the algorithm.....	8-83
8.8 The homology group of a color image	8-85
9 Multi-parameter images - projects	9-88
9.1 Parameters of images	9-88
9.2 Partition of images with multiple parameters.....	9-89

9.3	The inductive approach to the partition algorithm	9-90
9.4	Image simplification.....	9-90
10	Binary multi-dimensional images	10-92
10.1	Overview	10-92
10.2	The boundary operator	10-93
10.3	Cycles and homology classes	10-94
10.4	Adding cells.....	10-95
10.5	The data structure of the homology of the image	10-96
10.6	The run through the pixels of the image.....	10-96
10.7	Adding and removing cells.....	10-99
10.8	Simplification	10-102
11	Multi-dimensional images with parameters	11-104
11.1	Parameters of images.....	11-104
11.2	(m,n)-images	11-105
11.3	Topological decomposition and analysis of an image array.....	11-105
11.4	Image simplification.....	11-106
11.5	Adding and removing cells.....	11-107
11.6	Images with multiple parameters.....	11-107
11.7	Simplification and visualization	11-108
12	Projects	12-111
12.1	Variations of the algorithm - math	12-111
12.2	Removing, adding, and extracting topological features	12-112
12.3	Topologically restricted morphing	12-114
12.4	A measure of the integrity of a porous or cellular material	12-118
12.5	A measure of the saliency of a topological feature.....	12-119
12.6	The probability of a topological feature	12-120
12.7	Image classification.....	12-121
12.8	Image alignment	12-121
13	Prior work	13-123
13.1	The alpha-shapes method	13-123
13.2	Images as graphs v. images as subsets of the Euclidean space.....	13-125
13.3	Drawbacks of continuous methods.....	13-126
13.4	Contour Trees.....	13-127
13.5	The method of connected operators.....	13-127
13.6	Level sets v. sublevel sets.....	13-128
13.7	The digital Morse theory	13-128
13.8	Local v. global processing.....	13-128
13.9	Processing videos	13-129
13.10	Homology software	13-129
14	Appendix - linear algebra.....	14-131
	Bibliography	14-132
	Short description	14-134
	Index	14-135
